

EXOLUTION

Available as Standalone/Relativity Integrated Version

The screenshot displays the EXOLUTION software interface, which is designed for document redaction. The main window shows a spreadsheet titled "Sweetwater 129.00MW Project Partners Basis". The spreadsheet contains financial data across multiple years (2002 to 2011). Redaction overlays are visible, indicating areas where information has been redacted. The interface includes a "Select Redaction Type" dropdown menu on the left, which lists various redaction categories such as "Personally Identifiable Information | PII", "Confidential | CON", "Highly Confidential | HCONF", "Attorney's Eye Only | AEO", "Privilege | PRIVE", and "Custom Redaction Type | CRT". On the right side, there are two panels: "Sheet List (Count: 4)" and "Redaction List (Count: 9)". The "Sheet List" panel shows a table with columns for "Revise", "Sheet", "IsHidden", "IsProtect", and "Reviewed". The "Redaction List" panel shows a table with columns for "Redaction", "Sheet Na", "Range A", "User", and "TimeStar". A red starburst graphic in the bottom right corner of the screenshot reads "NOW SUPPORTS PDF".

Native Excel file Redaction Powered by Artificial Intelligence

Up to 90% reduction in review time and cost by pinpointing and mass redacting privileged information. Redact PII and PHI like Addresses, Dates of Birth, SSNs, Bank Card Numbers, and Your Own Custom PII Types have never been easier.

Fast | Feature-Rich | User-Friendly

Don't Produce What You Can't See

Production of native Excel files is tricky. The files could contain hidden, protected, and/or invisible content. Exolution ensures that you can see all data by un-hiding sheets, rows, columns, and all the other objects. You don't need passwords for the protected sheets because Exolution removes internal passwords, making all the data visible. It identifies cells with the same background and text colors, any un-displayable large text, as well as data located in far distant rows/columns and brings them in front of your eyes....to ensure you don't miss it.

Exolution's Hidden Content Explorer provides a good summary of the hidden and password protected content that may need special attention.

Real-time Auto-redact through Search and Mass Redact

Exolution is packed with many options to search and instantly redact across a large number of files. Global and document level search options support keywords and Regular Expression searches and pinpoint the exact location of the data, making mass redactions easy and super-fast. Exolution can search thousands of different search terms across a large number of documents and redact millions of values in minutes....literally.

DeepDup: Sheet Level Duplicate Identification and Redaction Propagation

Exolution's revolutionary patent-pending DeepDup technology has taken the de-duplication process to the next level by identifying sheet-level duplicates across non-duplicate files, and it doesn't stop there! It provides options to propagate redactions across the duplicate files or sheets in real-time. This saves a lot of review, redaction, and QC times as well as makes the work consistent across all the copies of the sheets.

Excel File Threading

Excel files with a large number of sheets are usually created over time by additions of new sheets to the existing files. As a result, a lot of the small files are fully contained within the large files. Exolution creates Excel file threads, which are like email threads, a huge boost to review efficiency. Exolution also creates Excel file clusters that bring together Excel files with at least one sheet duplicate across them.

PII and PHI Detection and Mass Redaction

Exolution has a built-in customizable feature to detect privileged information like Personally Identifiable Information (PII) and Protected Health Information (PHI). It facilitates to auto redact such information, or perform user-generated mass redactions across a large number of documents....in seconds.

Visually Similar Sheet Identification

Exolution's powerful Visually Similar Sheet Identification groups together the sheets with different data, but the same data layout. The documents like monthly financial statements or health records have striking layout similarity, but different data. You can browse through the visually similar sheets with different data and apply mass redactions across thousands of records in seconds...effortlessly.

Comprehensive Inverse Redaction

Exolution's Inverse Redaction feature includes cells, comments, text boxes, headers/footers, charts, pictures, and other objects. You can apply it at the sheet or file level. The inverse redactions are automatically applied to all of the duplicate sheets, in real-time. No subsequent processing needed to propagate redactions across duplicates.

Other Features...

- Blazing fast Redaction Explorer
- Unique Auto-Hide Empty Rows and Columns
- Color-Coded Point & Click Redactions
- Audit History
- Native Excel File Output
- Password Protection and Stamping Options

Flexible Pricing Options

- Server license behind your firewall (Relativity-Integrated or Standalone version)
- Per file license behind your firewall (Relativity-Integrated or Standalone version)
- Per project hosted service (Standalone version only)
